

TÜV Middle East – A Solution Provider for Health, Safety & Environment

Health, Safety and the Environment is becoming an integral part of every organization. It is very difficult to work without considering these critical elements. Even the legal and regulatory frameworks are driving the compliance to health, safety and environment very strongly. Organizations are facing increased complexity and uncertainty, which makes it difficult to manage technical and business risks. Failure to manage these risks can be fatal, consistency and control are becoming even more critical.

Health, safety and the Environment can be managed only by identifying, evaluating and controlling the critical issues (like risks, impacts, legal & regulatory compliance ... etc) related to them. While doing the above exercises consideration should be given to the scope of the business, location, activities, legal & regulatory frame work of the business and the country they operate in ... etc.

Target groups

Health, Safety and the Environment can be applied at all sectors of industry. In the Middle East region at present, more focus is on oil and gas, construction, petrochemical, manufacturing, transportation industrial sectors ... etc. However it can be implemented or practiced in all others too.

Benefits

A well managed health, safety and environmental operation ensures an organization - health and safety of their stake holders, safety of the assets, compliance to legal and regulatory requirements, acceptance to the client, environmentally friendly operations, a good image with the public, better insurance premiums, less down-times in operations ... etc. These give the management a lot of confidence in their operations in terms of health, safety and the environment.

Prerequisites

The organization must meet of the following criteria:

- Identify the needs & expectations
- Appoint a contact person
- Identify legal & regulatory requirements

Steps for the services
