

TÜV UK Ltd – Certification of Occupational Health & Safety Management Systems according to BS OHSAS 18001

OHSAS 18001 promotes a healthy and safe working environment by providing a framework that allows your organisation to consistently identify and control its health and safety risks, reduce the potential for accidents, aid legislative compliance and continually improve overall performance. OHSAS 18001 is the internationally recognised standard for Occupational Health and Safety Management Systems.

BS OHSAS 18001 is changing

A new ISO standard, ISO 45001 for occupational health and safety management systems is currently under development and is envisaged to replace BS OHSAS 18001 (indications are from October 2016).

Why seek certification to 18001?

Registration to OHSAS 18001 demonstrates commitment to improving the way in which the Health and Safety system is managed. An independent certification body such as TÜV UK Ltd displays a great understanding of this certification specification; we focus on how to benefit the company and how the organisation can aim higher. The standard enables businesses to set targets through the Health and Safety Policy and track ongoing measurements against the processes in place to ensure continual improvement.

Benefits of OHSAS 18001:

- Potential to reduce accident numbers, downtime and associated costs
- Clearly demonstrate to clients and stakeholders a commitment to statutory compliance and continual improvement of health and safety standards
- Portray an innovative, forward thinking and reassuring image to potential clients and business partners
- Enhanced corporate image to insurance companies with potential to reduce public and employer's liability premiums
- Increased access to new customers and business partners
- Better management of health and safety risks, now and in the future.
- Compatibility with ISO 9001 & 14001 enabling easier comprehension and straightforward integration

Prerequisites for certification

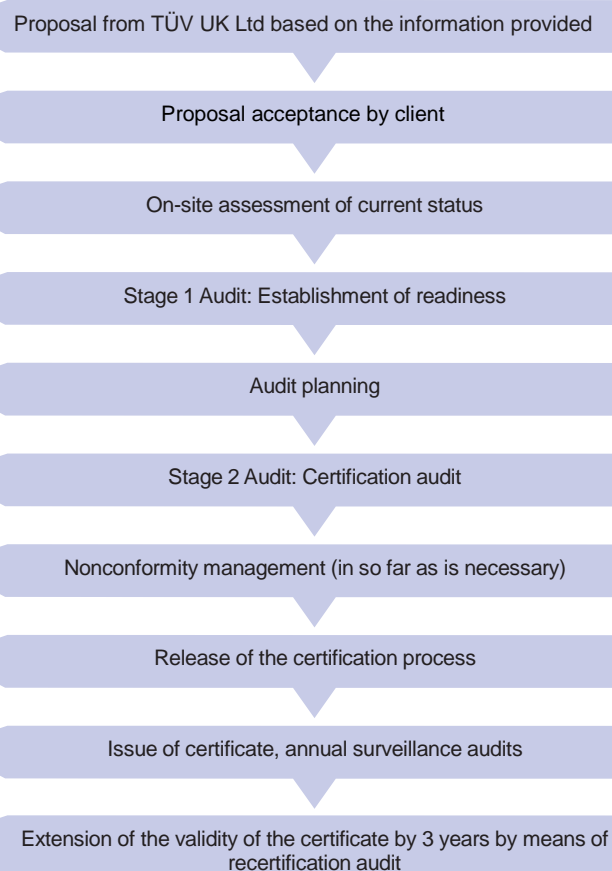

Use of the implemented Health and Safety Management System according to the requirements of BS OHSAS 18001 is required over a period of at least three months prior to certification. Essential requirements include:

- Establishment and communication of the Occupational Health and Safety Policy, objectives and programmes
- Identification and evaluation of risks existing at the workplace
- Observance of the legislation related to Occupational Health and Safety
- Determination of measures to be used in emergencies and risk avoidance
- Establishment and communication of responsibilities within the organisation for Occupational Health and Safety
- Appropriate training and instruction of employees
- Internal review and assessment of the Occupational Health and Safety Management System, aiming for continual improvement

Our know-how for your success

TÜV UK Ltd is a well-established and reliable partner for inspection and certification services. Our experts and auditors have extensive knowledge based on experience. This guarantees independence and neutrality, and also means we can offer continuity in supporting our clients. The benefit to you is clear: our auditors accompany and support the development of your company and provide you with objective feedback.

Process of Certification

Are you interested?

Please send us your response by fax, email or post.

We look forward to hearing from you.
