

# Productivity Improvement

Productivity is measure of how efficient we are in using the process inputs to get its output. Productivity is factor of multi-variables, such as quality, labour, capital, and cost. Productivity can be improved by improving quality, eliminate wastes, eliminate defects, reduce cost, and labour investment. Productivity improvement will keep the organization to have a competitive edge over other global business competitors. TUV India has developed a 2 days training program with the following objectives to understand the general concepts of the productivity to know the method of using basic statistics needed to improve productivity to understand the business process and identify improvement opportunities, to differentiate production from productivity, to develop metrics to measure productivity for improvement, to identify the elements of the cost of poor quality and the method to reduce it and to now and apply the needed tools that can be used to improve productivity.
