

TUV USA, Inc. – Certification of Education providers according to DIN ISO 29990

Training and further education has grown enormously in the past few years and thus also the number of providers in this field.

TUV USA, Inc. offers education providers a certification according to DIN ISO 29990 with which they can prove their quality, gain a better position in the competition for customers and employees as well as optimize their internal processes: International standard defines basic Requirements for education and training institutions and their services. In addition, it creates for the first time the possibility of cross-border comparability.

Target groups for certification

The service is aimed at a wide range of educational providers, such as vocational training and lifelong learning, private schools and universities and organizers of in-house trainings. Self-employed and non-self-employed departments of organizations outside the education sector (for example, in industrial or service enterprises) can also be certified when they are concerned with education and training.

Advantages of certification

A successful certification by TÜV NORD CERT and the associated certification mark show a training institution as a quality provider. This improves competitiveness - even at the international level and not only appeals to potential customers, but also facilitates the search for qualified personnel. The audit contributes to a sustainable quality assurance and can reveal potential for improvement and savings, which can be used for process optimization and lead to higher profitability. In addition, certified training providers gain a better starting position when applying for public contracts as well as for admission to the Accreditation and Admission Regulation for Work Promotion (AZAV) in order to be able to offer continuing vocational training on behalf of the Federal Agency for Work.

Requirements for certification

For successful certification, the requirements of the standard must be met with regard to both the educational services and the Management system. This includes, among other things, specifications in relation to

- Analytics
- Content and Process Learning
- Curriculum
- Support and monitoring of the
- Availability of and access to learning resources
- Evaluation
- Financial, risk, communications and human resource management

Route to the Certificate
