

ISO Revision

ISO 14001:2026

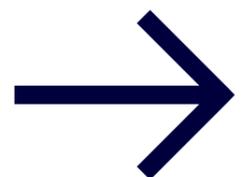

**Sharpening the focus
on climate action**

Climate Protection is now firmly embedded in ISO 14001, the standard for environmental management systems (EMS).

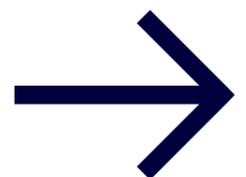

But what does this mean for companies exactly?

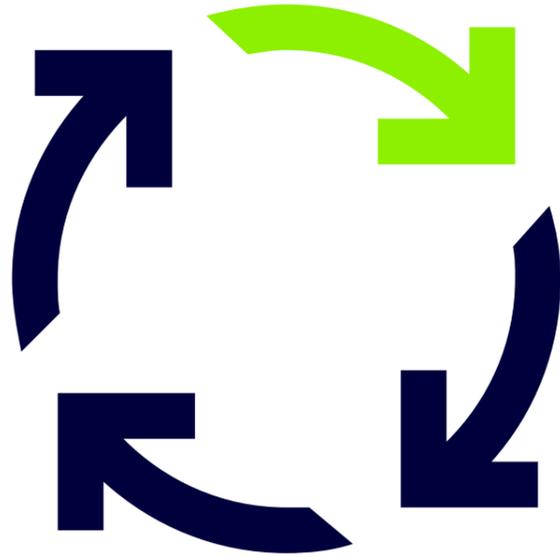

Context Analysis

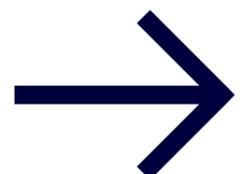

Organizations must actively determine whether climate change is a relevant factor for their management system.

Life Cycle Perspective

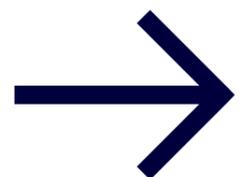

The requirement to consider the life cycle of products is now more prominent.

Stakeholder Focus

Requirements and expectations from customers, authorities, and other stakeholders regarding climate action must be systematically identified.
