

Environmental Monitoring Program

To ensure safety of consumers every food handling environment should define an environmental monitoring program which can help determine if the processing environment is under microbiological control. Good hygiene, cleaning and disinfection procedures should be in place to ensure that the food processing environment is free from unacceptable levels of microbial contaminants.

TUV India testing laboratories follow internationally approved methods and can help you by checking the effectiveness of your environmental monitoring program by performing environmental hygiene, air sampling, plate monitoring and swab analysis for surfaces and individuals.

Vectors of Contamination:

- Raw materials
- Food Handlers & Equipment handlers
- Environment
- Processing Equipment

Where to monitor

An environmental monitoring program should include the regular screening of surfaces, such as worktops, sinks, drains, utensils, equipment, walls, floors and ceilings, air quality within the food processing environment and food handlers.

Ways to monitor

Contact Plates

Swab Analysis

Air Sampling (Active & Passive monitoring)
